

HB9 - Handball Event Details Feed Specification (POB)

Version 3.0
July 2011

Presented by:
Paul Every

Overview

This time-coded feed offers a comprehensive package covering all events in a match with player, team, event type, minute and second for each action. This includes goals scored by each player along with assists etc.

This document will cover the following topics:

- Production requirements
- Feed Specification - XML element/attribute/value descriptions

Production Requirements

IP Address Permissions

The following IP Addresses should be allowed through the firewall: -

- 81.19.48.69
- 81.19.48.109
- 81.19.62.64/2
- 80.169.33.170

FTP Push

The subscriber should prepare an FTP site for Opta to push XML files to. Opta will need the following information from the subscriber:

- FTP Hostname
- Username
- Password
- Directory to post files to

Subscribers are advised that we put files with a .tmp file extension until the file is fully deployed and then rename to the actual described filename (for example: srml-8-7-results.xml.tmp to srml-8-7-results.xml).

HTTP Push

Http push is available as an alternative means of distribution to the customer's webserver.

Email customerservice-uk@optasports.com for more information on these methods.

Delivery Timings

Once a production environment is established between Opta and the subscriber, Opta will deliver an initial file containing the current tournament's fixtures/results with all data up-to-date. The file will be then continue to be updated as necessary.

Opta recommends that subscribers update their database or presentation applications every time they receive a new file. Otherwise, they should poll their FTP server at a regular time level to check if updates have been made, if they would rather have more power of the frequency of update.

XML Future Updates

Opta hold the right to add Elements and Attributes to the XML structure without prior notice and can remove non-essential Elements and Attributes with two weeks notice.
